
A Deep Dive into the Future of Information Access with Assima In-App Search

Being able to access information quickly and effectively is crucial for smooth business operations in this fast-paced environment. According to some estimates, employees usually spend a large chunk of their workweek, nearly up to 20%, into looking for internal information. If that time could be cut in half, just think of the productivity boost!

Assima In-App Search is the revolutionary [digital adoption tool](#) that, by enabling smooth search capabilities inside of apps, is completely changing how businesses access and use information.

Understanding the Challenge

Businesses in all sectors often struggle with information overload. It can be difficult to find the appropriate data at the right moment due to the volume of digital content. Normal search techniques sometimes ask users to open new tabs, exit the program they are in, or even switch across computers. This causes frustration and inefficiency in addition to disrupting workflow.

A McKinsey report claims that workers look for and gather information for about 1.8 hours each day. In addition to productivity, employee engagement and satisfaction also has an impact. [Assima In-App Search](#) seeks to solve these issues by incorporating search features right into the programs that staff members regularly utilize, guaranteeing that they can easily find the information they require.

Introducing Assima In-App Search

Assima In-App Search is a powerful, no-code solution designed to enhance productivity and user experience by providing immediate, context-sensitive access to relevant content directly within any live application. With its seamless integration capabilities, Assima In-App Search enables users to find the information they need without disrupting their workflow, improving efficiency and reducing support costs.

01 Transform the Way You
Access Information

Deep Dive into Key Features of Assima In-App Search

No-Code Platform

1. No-Code Platform

One of the standout features of Assima In-App Search is its [no-code platform](#), allowing for effortless integration into any application without the need for complex coding. This ensures a smooth setup process and immediate usability across the organization.

- **Effortless Integration:** Deploy Assima In-App Search across any application, making it accessible for businesses of all sizes. This no-code platform means less time spent on technical setups and more time focused on core tasks.
- **Cost-Effective:** Organisations can provide help at the point of need to users on all applications for a subscription fee per end user.

2. Contextual and Role-Based Search

Assima In-App Search provides contextual and role-based search results, ensuring that users receive information relevant to their current task and role within the organization.

- **Role-Based Content:** The information that appears in search results can be modified based on the user's role, meeting their specific requirements and responsibilities with relevant and personalized information.
- **Contextual Awareness:** The platform automatically adjusts search results based on the user's current screen, delivering the most pertinent information without requiring manual input.

3. Dynamic Content Filtering

With Assima In-App Search, users have the flexibility to filter search results and perform manual searches, allowing for precise and efficient information retrieval.

- **Document Filtering:** Users can filter search results to view specific content types, such as documents or training materials, relevant to the task at hand.
- **Manual Search Option:** For those moments when users need to find specific content, the manual search option provides the flexibility and control to locate exactly what they need.

4. System Guides

In conjunction with [Assima Train](#), guides navigate users through processes step-by-step, enhancing learning and task completion.

- **Task Assistant:** Offers an in-application task system that provides clear, step-by-step guidance, making it especially beneficial for training purposes and onboarding new employees.
- **Visual Steps and Table of Contents:** Users can navigate through different steps using a table of contents, allowing easy access to specific parts of a guide or document, enhancing the overall learning experience.

5. Content Integration and Access

Assima In-App Search seamlessly integrates with the Assima cloud, linking a wide range of content, including documents, training materials, and policy documents.

- **Assima Cloud Connectivity:** Connects to external knowledge bases and content systems, providing comprehensive access to resources within the application.
- **Centralized Access:** This feature ensures that all necessary information is centralized and up-to-date, improving compliance and adherence to organizational policies.
