# Assima In-App Search

assima

## Overview

Assima In-App Search is an innovative tool developed to give employees immediate, contextual access to data in any workplace application. It offers a smooth and user-friendly experience to boost productivity, reduces the learning curve and facilitates the adoption of enterprise systems by bridging the gap between users and information they need.

## How Does Assima In-App Search Work?

**Search Within Applications**
Users enter search results within the In-app search bar that's integrated with the enterprise software.

**Contextual Results**
The search engine offers results that are specific to the user's current role, screen, or task.

**Instant Answers**
Users can access documents, videos, FAQs and step-by-step guides without exiting or switching between the applications.

**Actionable Insights**
Search trend analytics give businesses insightful input to enhance workflows and content.

## An Overview of Assima Features

**01 Contextual Search Outcomes**
It displays the most relevant content by automatically filtering material according to the user's location within the application.

**02 Knowledge Base Integration**
It seamlessly integrates existing resources such as system manuals, training materials, FAQs and guides.

**03 Real-time Reporting**
User activity and tracking of content allows understanding of what employees find relevant dependent on application.

**04 Multi-language Support**
The support allows for multilingual search interface capability, ensuring accessibility for global teams.

**05 Customizable Interface**
The feature allows organizations to customize the search experience to match their operational and branding needs.

## Challenges Addressed by Assima In-App Search

**Reduces Downtime**
Users are more efficient because they don't waste time looking for solutions away from the application

**Improved Self-Efficiency**
Employees can handle their problems on their own, which reduces the dependency on support teams.

**Simplifies Training**
Gives users instant access to training materials, speeding up onboarding and improving adoption.

**Increases Content Utilization**
Makes it simple to find existing knowledge resources and ensures they are used effectively.

## Target Users

**Large Enterprises**
Organizations with large number of employees and complex systems that want to streamline access to knowledge.

**Training Teams**
Teams that offer just-in time guidance to facilitate system adoption and employee learning.

**Sectors Requiring Compliance**
Sectors like finance, manufacturing, software companies and retail depend on fast and accurate information
