

Assima Train

Product Overview

Assima Train is a highly advanced systems training platform that was designed using our 4X patented cloning technology. It creates hyper-realistic, highly immersive, and interactive simulations, or rather, object-based clones of any application.

You can use these clones to provide a safe training environment for your employees and users. The simulations are disconnected and independent from the live system and data, thus, eliminating any risks of interfering with the actual operations of the organization.

How Does it Work?

- The Assima Capture Engine is used to record the processes happening on the screen. It is all done in one go instead of taking several screenshots for one process.
- Each screen capture is completely editable as they are recorded as object-based clones. You can copy, paste, move, resize, remove, and even modify font characteristics.
- Publish and deliver content to learners in any format. Any modifications made are reflected across lessons; you don't need to update them individually.

Features Overview

- 4X patented cloning technology that captures fully editable, object-based clones.
- Any edits and changes are applied across screens automatically.
- Entire lessons can be translated easily without re-recording, including user interface, data and instructions.
- The actions and progress of every learner can be looked into from the detailed analytics dashboard.
- Multiple datasets can be created from the same source to fit different needs without complete rework
- Any sensitive, protected data can be anonymized and replaced in a few clicks.

Challenges Solved

- 01** Easy editing features relieves much of the work of content creators and programmers. It has a graphic interface and hence, can be operated in a simple and easy manner.
- 02** You can create training content for software or upgrades yet to be released if you know what changes are coming. This fast-tracks the training and transition process.
- 03** Detailed analytics ensures that you always have complete visibility of the learning journey of the entire workforce.
- 04** You can easily customize lessons for different roles, teams, and departments, which solves scalability questions.
- 05** Any modifications, translations, data anonymizations, and other rework gets reflected across screens, so you do not have to work on each lesson from scratch.

Who is this for?

- Large corporations and multinational organizations are the biggest beneficiaries of Assima Train and its allied tools. However, any entity with large-scale training needs can utilize Assima.
- Assima can be used for industries like finance and banking, retail, government/public sector, telecommunications, transport, manufacturing, and more.
- Software companies partner with Assima to deliver realistic training to their customers to ensure faster adoption and for the opportunity to deliver easily customized content.
- You can use Assima to assist any department, like L&D, HR, CR/CS, IT, R&D, sales and marketing, operations, resource management, order fulfillment, finance, etc.

Benefits Derived

- Assima Train uses simulation-based training, which is proven to improve knowledge retention and recall.
- Actionable insights allow you to track the progress of every learner and quickly modify lessons so that the learning experience is improved.
- Easy editing features make it possible to tailor lessons to the specific requirements of individuals or groups.
- Assima is proven to help reduce onboarding time and costs, streamline remote training, and ensure data security.
- You can generate lessons with different datasets for different departments from the same source without complete rework.
- Scalability is one of Assima's strongest suits. It allows you to expand your training efforts across borders and communities with ease, without the need to re-record content for every required language.
- Assima's immersive nature keeps learners engaged and motivated and ensures smooth digital adoption and transition.
